

Morgan

Virtual Board Member

Purpose: an AI-powered “eighth board member” that joins CAB meetings to provide a consistent new voice, filling gaps in the board’s diversity of perspective and enriching the overall discussion. AI is simply the enabler - the aim is a broader, more insightful conversation.

Ambition: To evolve Morgan from a passive, fixed-persona participant into a capable contributor that can surface patterns and enrich discussion, with a longer-term horizon of introducing multiple tailored agents and, potentially, a multi-agent shadow board.

#3 The Reactive Contributor

Morgan evolves to gently signal when it has identified a meaningful pattern, contradiction, or missed connection – for example through a subtle visual cue. It still does not interrupt, but can raise its “virtual hand” to offer timely insight when appropriate.

#4 Morgan and Friends

Introduce additional AI agents, each with distinct, fixed personas (e.g., Gen Z, nearing retirement, public-sector viewpoint). The CAB can direct questions to specific agents to access different perspectives in real time.

#1 Bringing Morgan to Life

Build Morgan using a Microsoft-first approach while remaining open to non-Microsoft components where they add clear value. Engage Microsoft to test feasibility, but plan for Slalom engineering and Foundry teams to prototype and iterate quickly toward a usable MVP.

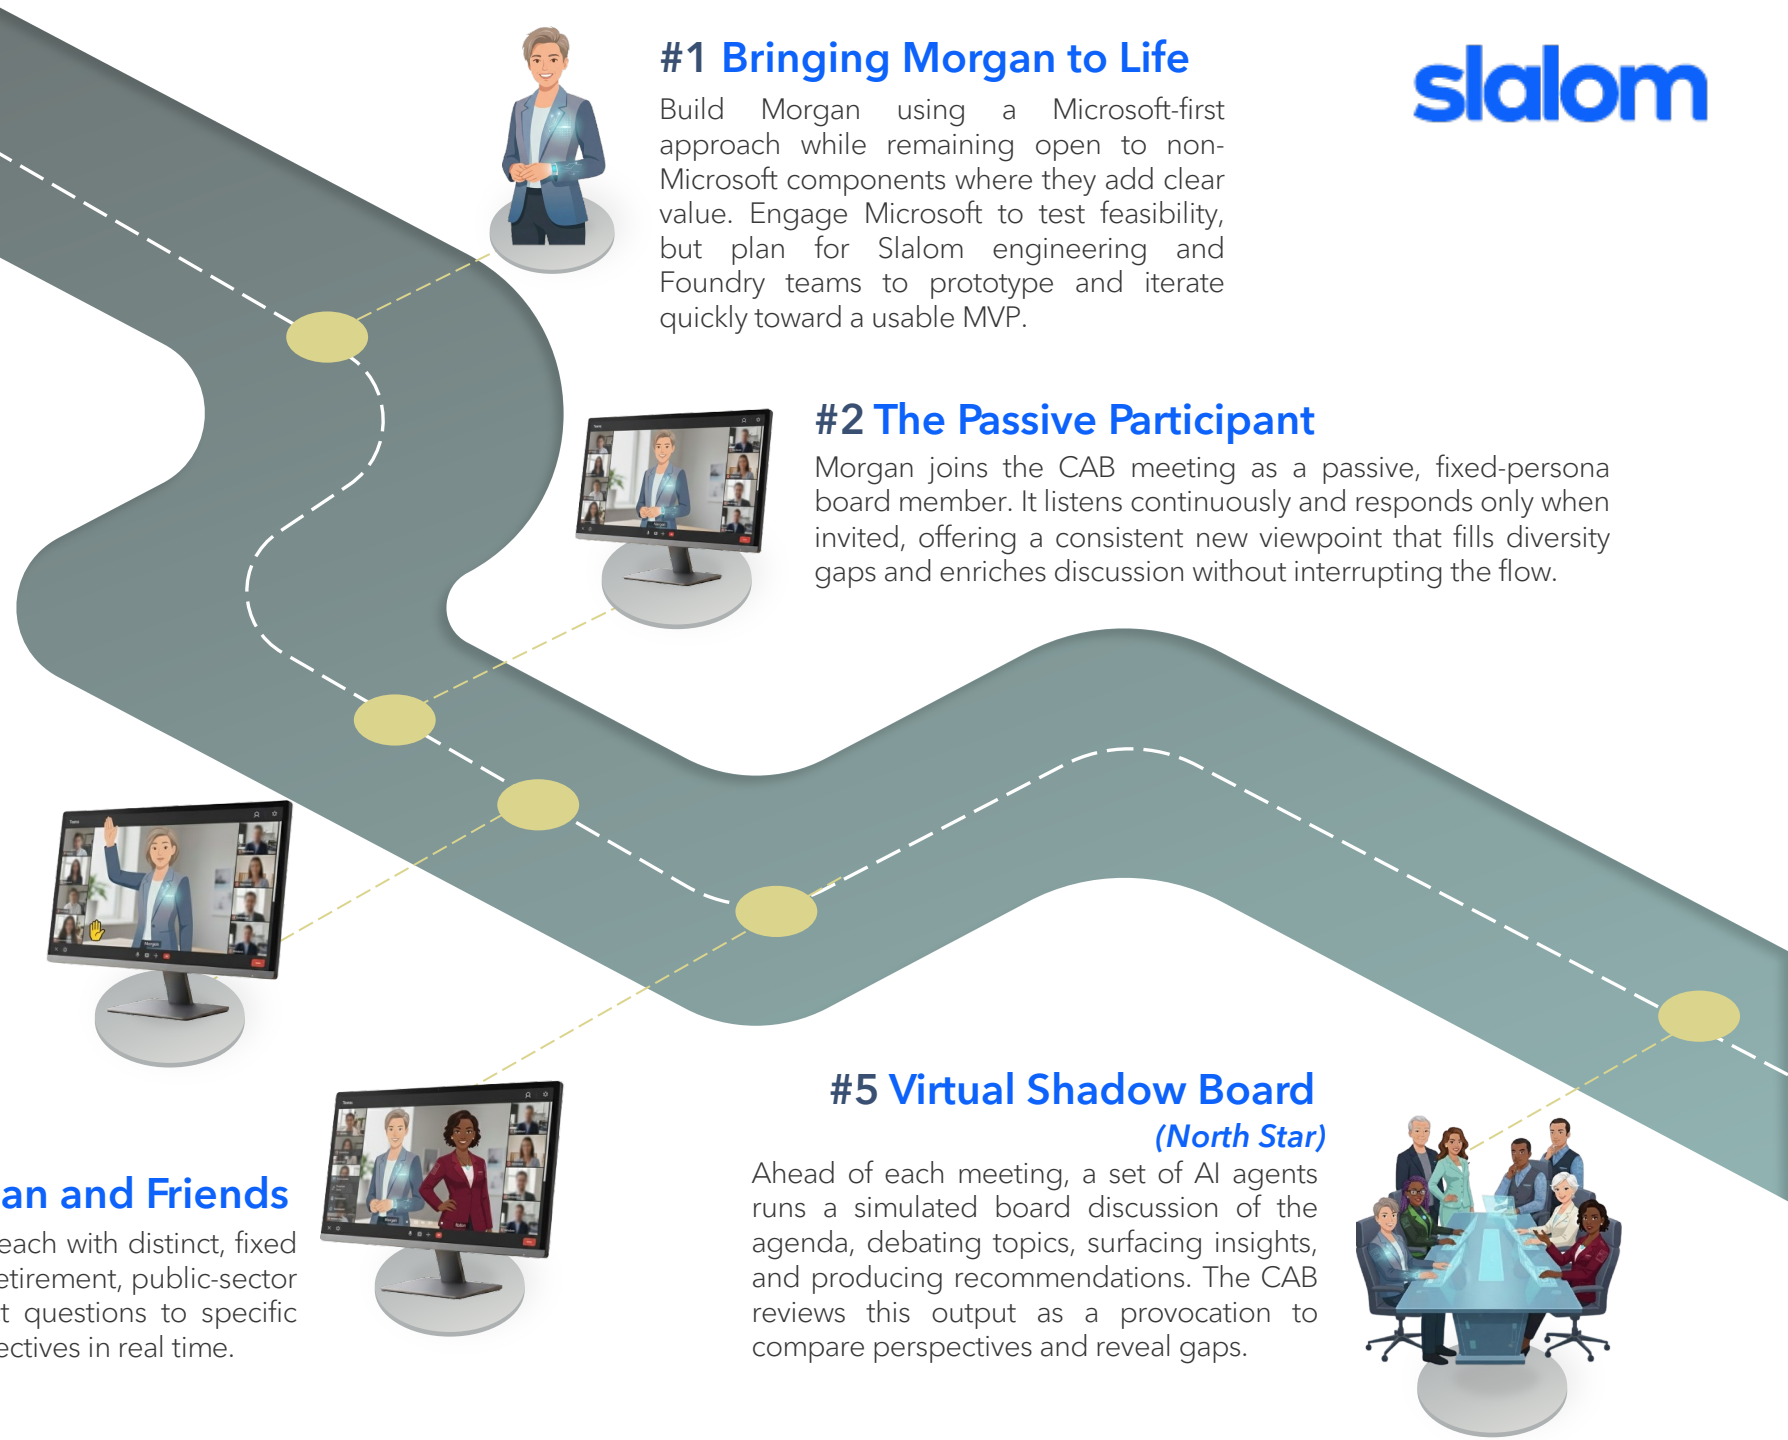

#2 The Passive Participant

Morgan joins the CAB meeting as a passive, fixed-persona board member. It listens continuously and responds only when invited, offering a consistent new viewpoint that fills diversity gaps and enriches discussion without interrupting the flow.

#5 Virtual Shadow Board (North Star)

Ahead of each meeting, a set of AI agents runs a simulated board discussion of the agenda, debating topics, surfacing insights, and producing recommendations. The CAB reviews this output as a provocation to compare perspectives and reveal gaps.

slalom

Morgan | Next Steps

The immediate focus is to **validate how we could technically deliver Morgan**, align on the right build path, and shape a small, testable prototype. By firming up feasibility, personas, and meeting participation mechanics, we can **quickly confirm what's realistic** and move into controlled experimentation with confidence.

Draft Concept

Prepare the one-pager summarising ambition and phases.

Persona Design

Define initial personas and behavioural boundaries.

Tech Sounding

Richard to validate feasibility with Microsoft contacts.

Teams Feasibility

Confirm how an AI agent can join and listen in Teams.

Foundry Check

Assess whether this is a viable build route.

Prototype Plan

Outline scope and approach for a Phase 1 MVP.
